## The pair's overall energy: Prince Harry and Meghan Markle

---

When Prince Harry and Meghan Markle first stood side by side in a public garden in 2017, the world felt the charge of a genuinely consequential meeting. Their synastry reveals a relationship that is not merely romantic but profoundly activating—two people who, from the start, have been unable to leave each other quite the same. The overall compatibility score of 57% speaks not of a tepid middle ground but of a dynamic, high-contrast bond in which every strength is met by an equally insistent challenge. This is the hallmark of a pair who will never bore each other and who, if they do falter, will do so because the energy between them demands evolution at a pace few couples are asked to sustain.

The element balance tells the first layer of the story. Harry brings a dominant Earth signature—six of his planets occupy Earth signs, giving him a natural orientation toward the tangible, the reliable, and, at times, the stubbornly practical. Meghan's chart, by contrast, is carried by Air, with six planets in Aquarius-adjacent or Mercury-ruled signs, lending her a quick, verbal, and socially attuned temperament. The remaining elements—Fire and Water—are present in both charts, but the Earth-Air axis sets up a foundational rhythm: she conceptualises, he grounds; she connects, he builds. In the early days of their courtship, this likely felt like a perfect complement. She brought a fresh, articulate breeze into the heavily structured world of palace protocol; he offered a rooted, protective presence that promised sanctuary from the swirling scrutiny she was attracting. Over time, however, Earth can read Air as detached, and Air can find Earth pedestrian. Learning to navigate that fundamental difference has been, and will remain, the quiet work of their daily life.

No less striking is the sheer density of planetary projections into one another's houses. When we look at where Harry's planets fall in Meghan's chart, we see his Venus and Saturn both resting in her fourth house, the domain of home, family, and emotional foundation. This is an angular placement and therefore one of the most powerful in synastry. It means Harry's way of loving (Venus) and his instinct for structure (Saturn) both land directly in Meghan's most private, rooted sphere. On one hand, this is deeply stabilising: she feels, perhaps for the first time, that a partner genuinely takes her domestic world seriously, that he is willing to build a home with her rather than simply passing through it. On the other, the Saturnine presence can feel weighty—his sense of order may, at times, press against her need for autonomy. Meanwhile, his Mars sits in her fifth house of creativity, romance, and

children. This is a placement of considerable spark: Harry's action-drive directly stimulates her playful, expressive self. It is easy to see how their early dating phase crackled with spontaneity and laughter, and how he remains the person who most readily pulls her out of her head and into the joy of the immediate moment.

The reverse projection—Meghan's planets into Harry's chart—is even more emphatic. She places a stellium of three personal planets—Sun, Mercury, and Mars—directly into his seventh house of partnership. This is not a subtle influence; it is a wholesale activation of the marriage-and-commitment axis. From the beginning, Meghan represented "the partner" for Harry, the figure who would bring his relationship sector alive with light (Sun), words (Mercury), and drive (Mars). Simultaneously, she places a second stellium—Moon, Venus, Jupiter, and Saturn—into his eighth house, the zone of transformation, intimacy, and shared resources. This is where the relationship moves from companionable to consuming. Meghan enters Harry's eighth house like a tide coming in over a shoreline that has never known deep water. She stirs old wounds, awakens dormant desire, and demands a level of emotional honesty that may have felt impossible in previous, more formal arrangements. It is no exaggeration to say that, through Meghan, Harry encountered an almost alchemical pressure to change. The pair's first public outings, their rapid progression to engagement, and the seismic decisions they made together in the years that followed all carry the signature of an eighth-house activation: nothing stays on the surface for long.

The accented axes amplify this story. Six planets fall across the 1/7 axis, the line of "Me and You." This is the axis of partnership itself, and its accentuation means that their individual identities were always going to be renegotiated through the lens of the union. There is a danger here of losing oneself in the other—or of perceiving every personal development as a joint decision—but there is also the promise of a relationship that is the central creative project for both people. Seven planets occupy the 2/8 axis of resources, a powerful concentration that speaks to the material and emotional merging at the heart of their union. It is what made the question of financial independence and institutional funding not just a practical matter but a deeply existential one. Six planets line up on the 4/10 axis of home and career; five on the 5/11 axis of creativity and community; and four on the 6/12 axis of service and spirit. In plain terms, every major life sphere has been lit up by the presence of the other. There is no compartment of their lives that can be kept separate or untouched.

And yet, there is an elegant piece of architecture that holds the centre. The mutual reception between Harry's Sun in Virgo and Meghan's Mercury in Leo is a quiet structural plus. Here, Harry's core self and Meghan's communicative intelligence are in each other's signs of rulership. It means that his instinctive way of being—measured, discerning, helpful—is precisely the language her mind speaks, while her mode of expressing herself—warm, dramatic, generous—is exactly what his ego recognises as valuable. Even when they frustrate one another, there is a point of innate intelligibility. He gets what she means, not just what she says, and she validates who he is, not just what he does. This single thread of mutual reception has likely been the rope they have grabbed in stormy moments, the reason why, even mid-argument, there is a flicker of recognition that the other person is not a foreign country but a familiar dialect.

The first impression between them, then, was not simply one of attraction but of activation. She walked into his seventh house and set off bells he did not know were waiting. He brought structure into her home life and ignited her creative fire. What the world saw as a fairy-tale beginning was, in astrological terms, a working meeting between two complete systems. The question this synastry poses is not whether they love one another—the architecture of the chart suggests they very much do, and deeply—but whether they can sustain the sheer volume of transformation their union demands. They are, in effect, a couple for whom the honeymoon and the hard work arrived simultaneously. Their success will depend less on the presence of romance and far more on their willingness to keep showing up for the tectonic shifts their meeting has set in motion.

## Emotional connection

---

The emotional landscape between Prince Harry and Meghan Markle is one of considerable tenderness and equally considerable volatility. To understand it, we must look first at the Moon, the primary carrier of emotional instinct, and then at the aspects that either support or disrupt its functioning. In this synastry, the Moon is both cherished and challenged, producing a bond in which emotional safety is a constant negotiation rather than a given.

Harry's Moon sits in the steady, sensual sign of Taurus, while Meghan's Moon is in Libra, the sign of balance, partnership, and aesthetic harmony. At first glance, these two Venus-ruled Moons should find each other: both seek comfort, both respond to beauty, both detest emotional ugliness. In practice, the whole-sign square between them—Taurus and Libra are in a tense geometric relationship—means that their instinctive emotional reactions are often at odds. Harry's Taurus Moon needs stillness, predictability, and the reassurance of physical presence; it is at its most peaceful when the environment is settled and the senses are soothed. Meghan's Libra Moon, by contrast, processes emotion through dialogue and social calibration. She needs to talk things through, to weigh perspectives, to restore harmony through connection. When he withdraws into silence to regain his centre, she can read that as withdrawal from her, and her instinct to pursue the conversation can feel intrusive to him. This is not an insurmountable difference, but it is a foundational one, and it means that even their most intimate moments of comfort require translation.

The harmonious aspects to Meghan's Moon tell a gentler story. Harry's Uranus forms a flowing sextile to her Moon, an aspect that brings a note of unexpected delight and emotional refreshment. He surprises her—not with grand gestures alone but with a quality of unpredictability that keeps her emotionally engaged. Her Libra Moon, which can sometimes settle into over-negotiated stasis, is periodically jolted awake by his Uranian energy. In turn, her Moon trines his Chiron, the point of the wounded healer. This is one of the more poignant threads in the entire synastry: he finds, in her emotional presence, a salve for old pain. His late mother's loss, the isolation of a life lived in institutional display—these are not things she fixes, but they are wounds that her presence soothes simply by being what it is. The Chiron contact to the Moon suggests that at a subtle, almost pre-verbal level, he associates her with healing.

Yet the hard aspects are impossible to ignore. Harry's Jupiter squares Meghan's Moon with a tight orb, an aspect that, per the knowledge base, signals "disagreements in worldview and life principles." Here, the tension is between

his expansive, philosophical reach and her need for emotional security. Jupiter in Capricorn squares her Moon in Libra, and while both signs are cardinal and ambitious, the square produces friction around beliefs, faith, and the larger meaning of their life together. He may, at his most optimistic, push for a vision that feels destabilising to her emotional equilibrium; she may, in seeking harmony, resist the very expansions that he believes are necessary. This is the aspect of the couple who can argue about whether to move country or how to raise their children not because they don't love each other but because their fundamental sense of what feels safe or right is tuned to different frequencies.

The opposition between Harry's Moon and Meghan's Uranus, and the complementary opposition of his Moon to her Lilith, add further textures. Moon opposite Uranus is a classic aspect of emotional instability, where the need for freedom and the need for attachment pull in opposite directions. This does not condemn the relationship to permanent chaos, but it does mean that there will be periodic ruptures in emotional consistency—days when he feels she is suddenly distant or when her craving for autonomy feels to him like abandonment. And the Moon-Lilith opposition brings shadow material into the emotional field. Lilith, the point of the suppressed and the taboo, can stir in him feelings of jealousy, insecurity, or a sense that he is not being shown the whole picture. These are not rational responses, but they are real, and they emerge most forcefully in the dark of the night, when the defences are down.

The whole-sign aspects broaden the picture. Harry's Taurus Moon forms a whole-sign square not only to Meghan's Libra Moon but also to her Leo Sun and Mercury. This means that her core identity and communication style frequently feel emotionally jarring to him. Her Leo Sun is proud, dramatic, and expressive; his Taurus Moon wants calm, understated, and unruffled. The square does not mean love is absent—they clearly adore each other—but it means that her very brightness can, on an emotional level, feel like heat rather than warmth to him unless they both consciously modulate. The whole-sign trine between his Moon and her Venus, on the other hand, is a soft landing place: her way of loving, with its Virgoan attention to detail and acts of service, genuinely nourishes his emotional body.

Using the three-perspective model on the Jupiter-Moon square reveals the complexity. For the pair as a whole, this aspect introduces recurring debates about vision and values, debates that can either deepen mutual respect or erode goodwill depending on how they are handled. For Meghan, as the person whose Moon receives the aspect, Harry's Jupiter acts as a catalyst that both inspires and unsettles. She may feel that his big-picture thinking sometimes dismisses her immediate emotional reality, that his philosophical optimism rides roughshod over her need for relational harmony. For Harry, the active end, his Jupiterian impulse to expand and improve is constantly met with an emotional counterweight that he does not fully understand. He offers a solution or a possibility and meets, instead, a need for processing and reassurance. His growth edge is to learn that not every impulse to improve is helpful, that the horses of optimism must sometimes be reined in so that the soft animal of the heart can catch up.

The placement of the Moons in each other's houses adds another dimension. Harry's Moon falls into Meghan's eleventh house of friendship, community, and social vision. He experiences emotional safety not in an isolated dyad but in the context of a shared life with others—through their mutual friends, their charitable work, their sense of belonging to something larger than themselves. Her eleventh-house placement of his Moon means that when she welcomes him into her social world, she is quite literally feeding his emotional body. Meghan's Moon, by contrast, lands in Harry's eighth house, the underworld of the chart. This is a placement of profound emotional intensity, where feelings are never light or merely companionable but always carry the weight of transformation. She brings an emotional depth to his life that he may never have previously accessed, but it can also feel overwhelming—the eighth house does not do casual comfort. He cannot relax into her emotions; he must meet them at a depth that demands his full presence.

In sum, the emotional connection is real, tender, and wired for growth rather than ease. They soothe each other in some ways and provoke each other in others, often at the same time. The art of this relationship lies in learning to

distinguish between the two and in building the daily practices that allow the tenderness to accumulate faster than the tension.

## Romance and attraction

---

The romantic field between Prince Harry and Meghan Markle is rich with classical indicators of attraction, but it carries a distinctive signature: love here is intense, transformative, and laced with a tension that both pulls them together and pushes them apart. The synastry contains the central markers of romantic compatibility—Venus-Mars contact, Venus-Pluto conjunction, and a web of supporting Venusian aspects—but it also houses challenging configurations that prevent the relationship from ever settling into complacency.

The Venus-Mars square is, without question, the engine of their romantic and sexual pull. In the knowledge base, Venus-Mars aspects are described as the "central marker of intimate compatibility," and while the square is inherently a hard aspect, it does not diminish attraction—it electrifies it. The square between Harry's Mars in Sagittarius and Meghan's Venus in Virgo produces a dynamic in which the drive to pursue and the capacity to receive love are constantly generating friction. His Mars, in the sign of the adventurer, desires exploration, spontaneity, and a certain grandness of romantic gesture. Her Venus, in precise, discriminating Virgo, wants love expressed through small, consistent acts of care. He might plan a sweeping surprise weekend away and feel wounded when she seems distracted by whether the itinerary is properly organised; she might spend days preparing a beautifully thought-out meal only to find he was hoping for something more impulsive. This square does not mean they are incompatible—far from it—but it means their romantic languages are tuned to different keys, and the work of translation must be deliberate.

The Venus-Pluto conjunction is the aspect that deepens everything. When Harry's Venus in Libra meets Meghan's Pluto in Libra, the result is, per the knowledge base, "a deep emotional connection, transformation, and sexual compatibility." This is not a light or breezy aspect; it is the hallmark of a love that changes both people at the root. Pluto's presence on Venus means that Meghan's mere existence stirs something compulsive and consuming in Harry's relational nature. He cannot be indifferent to her; she unlocks a need in him that he may not entirely recognise and certainly cannot control. In the positive register, this produces a devotion that is unshakeable, a willingness to burn down old structures—quite literally, in their case—in order to protect the union. In the negative register, it can slip into possessiveness, fear of loss, and the kind of emotional intensity that exhausts both parties. The knowledge base is clear that Pluto aspects to Venus can "add passion and strong attraction" even in the absence of a precise Mars-Venus connection, and here it amplifies what is already present.

Supporting these heavyweights are a series of harmonious Venustian threads. Harry's Saturn forms an exact sextile to Meghan's Venus, a beautiful stabiliser that adds "mutual responsibility" to the romantic mix. Where the Mars-Venus square burns hot and sometimes chaotic, Saturn-Venus is the cool hand on the brow, the commitment to stay and work when the fire dims. This aspect suggests that, for all the intensity, there is a deep and abiding sense of duty to one another's happiness. She trusts him to show up not just in the grand moments but in the daily grind of partnership. Harry's Venus also sextiles Meghan's Sun, indicating a genuine aesthetic resonance—he simply likes who she is, and that liking is not dependent on performance or circumstance. And his Venus makes a flowing sextile to her Neptune, an aspect of "inspiration and idealisation." In the early stages, this produced a romantic haze, a sense that the other person was almost too good to be true. Over time, the Neptune contact asks for conscious grounding: can they love the real person, not just the shimmering image?

The Uranus-Venus square is the wild card. Harry's Uranus squares Meghan's Venus, an aspect the knowledge base describes as "incompatibility in aspirations for freedom." Here, the tension is between his need for unpredictability and her need for relational harmony. Uranus on Venus can feel electrifying at first—the thrill of someone who refuses to be conventional, who disrupts the expected patterns—but it can also produce a chronic sense of insecurity. She may never quite feel that she can hold him, that the relationship is safe from sudden shifts. And he may chafe against what he perceives as her attempts to stabilise something that he experiences as essentially dynamic. This is the aspect of the couple who must learn that freedom and commitment are not opposites but partners in a larger dance, and that neither can win at the expense of the other.

The whole-sign trine between his Taurus Moon and her Virgo Venus deserves mention as a quiet sustainer. Though not aspecting directly in degree, the sign-level harmony between these two receptive planets means that on a visceral, non-verbal level, his emotional body is soothed by her way of loving. Her practical kindnesses—the small, carefully chosen gifts, the way she arranges a room, her attention to the details of his comfort—land directly in the part of him that needs most to feel cared for. This is the background hum of affection that keeps the engine running when the louder aspects have exhausted themselves.

In terms of planetary house placements, Harry's Mars in Meghan's fifth house of romance and creativity is a textbook indicator of passionate activation. He brings a playful, competitive, and physically energising presence into her zone of self-expression. Their courtship inevitably involved a great deal of laughter, shared activities, and a kind of bodily joy that made the relationship feel youthful and alive. Her stellium in his eighth house—Moon, Venus, Jupiter, and Saturn—takes the romance into far deeper waters. Her very presence in his intimacy sector means that this relationship could never be casual; it demanded from the first date a level of vulnerability and emotional nakedness that Harry had likely protected himself from in less intense pairings.

The three-perspective model applied to the Venus-Pluto conjunction shows the following. For the pair as a whole, this aspect creates a relational bond that is transformative at the core. The partnership is a crucible in which old identities are dissolved and new ones forged, and the process is not gentle. For Harry, whose Venus is conjoined by Meghan's Pluto, she acts as a catalyst that strips his relational nature down to its raw essentials. He may feel that she sees through every carefully constructed public persona directly into the parts of him that are needful, hungry, and afraid. This is both the source of his absolute trust in her and, at times, a source of unbearable exposure. For Meghan, on the receiving end of his Plutonic intensity, she may sometimes feel that his devotion carries a weight she did not entirely sign up for, that his need for her has an edge of desperation that can feel claustrophobic. The growth for both is to recognise the Plutonic as a sacred force rather than a pathology—to honour the depth without being consumed by it.

Structurally, the romance between them is not fragile. It is wired with enough voltage to power decades of partnership, provided they learn to manage the heat. The Venus-Mars square keeps the attraction from ever going fully comfortable; the Saturn-Venus contact makes sure there is a commitment to match the passion; the Pluto conjunction ensures that neither will ever be the same again. The question is not whether they love one another but whether they can build a container strong enough to hold a love of this magnitude.

## Communication and mutual understanding

---

The communication dynamics between Prince Harry and Meghan Markle are shaped by an intriguing mix of intellectual stimulation, mutual recognition, and the occasional friction that arises when two quite different cognitive styles meet. The synastry contains several Mercury contacts, but more revealing perhaps is the mutual reception at the heart of their understanding—a structural feature that underpins all their verbal exchanges.

Harry's Mercury sits in Virgo, the sign of its rulership, where it is precise, analytical, and detail-oriented. His mind works best when it can categorise, improve, and serve. He thinks in terms of practical steps and often speaks with a care that reflects his Mercury's exacting standards. Meghan's Mercury, by contrast, is in Leo, where it communicates with warmth, drama, and a natural sense of performance. Her mind is expressive rather than analytical; she thinks best aloud, and her speech carries the Leo signature of generosity and self-assurance. Where Harry's Mercury dissects, hers illuminates.

The mutual reception between Harry's Sun in Virgo and Meghan's Mercury in Leo is the quiet genius of their communication. This configuration means that Harry's essential self—the Sun—is in the sign that Meghan's Mercury rules, while Meghan's Mercury is in the sign that Harry's Sun rules. In practice, this produces a loop of recognition: when Meghan speaks, she is addressing Harry's most fundamental sense of who he is, and when Harry expresses his will, he does so in a language her mind instinctively understands. This is not to say they never misunderstand one another, but rather that there is a baseline of intelligibility that many couples lack. He does not need her to translate herself into his terms; her natural voice is already resonant with his core identity. Conversely, the way he takes charge, organises, and makes decisions—his Sun in Virgo in action—feels to her Mercury like a clear and accessible signal, not a foreign transmission.

The explicit Mercurial aspects are relatively few, but what exists is supportive. Harry's Uranus forms a flowing trine to Meghan's Mercury, an aspect that the knowledge base describes as bringing "originality of thinking" to the mental connection. This means that their conversations are rarely boring; he introduces unexpected angles and provocative ideas that keep her mind engaged. She may find him intellectually unpredictable in a way that is more stimulating than destabilising. The Venus-Mercury quintile—a minor aspect, exact in orb—suggests a creative quality to their verbal exchanges, where talk and affection blend into a kind of conversational dance. They likely enjoy each other's wit, and there is a flirtatious undercurrent even in their most mundane discussions.

The whole-sign square between Harry's Taurus Moon and Meghan's Leo Mercury is the primary point of communicative tension. Taurus is a fixed Earth sign that processes slowly, viscerally, and with an insistence on sensory grounding; Leo is a fixed Fire sign that communicates dramatically, emotionally, and with a need to be heard and celebrated. When she is in full Leo-Mercury flight—expressive, emphatic, and perhaps a touch declamatory—his Taurus Moon can feel overwhelmed by the sheer volume of verbal output. He needs her to slow down, to let the words land in the body before reaching for more language. She, in turn, can interpret his silence or his measured response as a lack of engagement when it is, in fact, a different mode of processing. The square does not prevent understanding, but it does require a conscious effort to bridge the gap between her speed and his depth.

It is worth stating explicitly, as the knowledge base notes, that hard Mercury aspects "do not affect the emotional attitude partners have toward each other." Any communicative friction here is just that—a friction in the mechanics of talk, not a sign that their feelings are compromised. They can have a frustrating conversation about logistics or social obligations and still love each other unreservedly. The danger lies in mistaking the quality of the exchange for the quality of the bond.

There are no Jupiter-Mercury hard aspects in this synastry, so the specific damage pattern of "tendency to lie or manipulate" is not activated. The Neptune-Mercury contact is also absent, sparing them the fog and confusion that such aspects can bring. The communicative field, on the whole, is cleaner than many other areas of the chart, which is a genuine asset for a couple under constant public pressure. They can talk to one another and, more importantly, they can trust that the words mean what they say.

Their daily conversation style, given the mutual reception and the Leo-Virgo dance, likely involves a rhythm of her opening up with warmth and narrative—telling the story of her day, her feelings, her ideas—and him listening carefully before offering a succinct, practical response that she experiences as more comforting than its brevity might suggest to an outsider. She makes him feel seen in the conversation; he makes her feel that her words have landed on solid ground rather than dissipating into the air. The growth edge for both is to honour their different tempos: for her to remember that silence is not withdrawal, and for him to recognise that her expressiveness is not a demand but an offering.

## Sexual compatibility

---

The sexual synergy between Harry and Meghan is one of the most potently configured sectors of their synastry. It draws on the foundational Venus-Mars square, the deepening Venus-Pluto conjunction, and a supporting Mars-Pluto sextile to create an intimate field that is at once thrilling and demanding. The knowledge base identifies Venus-Mars as the central marker of intimate compatibility, and while the square between his Mars and her Venus introduces tension, it is a tension that fuels desire rather than extinguishing it.

The Mars-Venus square operates between Harry's Mars in Sagittarius and Meghan's Venus in Virgo. Sagittarius Mars seeks adventure, physicality, and a certain philosophical expansiveness in intimacy—it wants to explore, to play, to push boundaries in the service of discovery. Virgo Venus, meanwhile, desires precision, service, and the perfection of the intimate act as a craft. She is attuned to the small details of pleasure, the micro-gestures that accumulate into a larger experience. The square produces a dynamic friction where his instinct is to gallop and her instinct is to curate. In the positive register, this can generate a highly creative tension, with each partner invited to stretch beyond their comfort zone: he learns to slow down and attend to the subtleties, she learns to surrender to spontaneity. In the negative register, it can manifest as a sense of being perpetually slightly out of sync—he feels reined in, she feels rushed. The knowledge base notes that in hard aspect, Mars-Venus can produce "a drive to dominate," and there is indeed a power dimension here. Both are strong-willed individuals, and the sexual arena may become a site where control is negotiated as much as pleasure is shared.

The Venus-Pluto conjunction, however, is the aspect that gives the intimacy its weight. His Venus in Libra meeting her Pluto in Libra creates what the knowledge base calls "a deep emotional connection, transformation, and sexual compatibility." This is not an aspect for the faint-hearted. Pluto's presence on Venus electrifies desire with a compulsive, transformative charge. He does not simply want her; he needs her in a way that bypasses rationality and touches something primal. The intimacy between them is likely to feel fated, inescapable, and richly layered with emotional intensity. Together, they access depths that neither might have reached in less Plutonic pairings, and the vulnerability this demands is both the source of their profound bond and the site of potential power struggles. The negative pole of Venus-Pluto is "suppression in relationships, the desire to remake the other," and there may be moments when the intensity slips into control, when the need to possess overrides the capacity to simply connect.

The Mars-Pluto sextile is the balancing grace. Harry's Mars forms a harmonious sextile to Meghan's Pluto, an aspect the knowledge base interprets as "overcoming things together, support, motivation." Here, his active, desiring nature and her Plutonic depth are in easy dialogue. Rather than the combustion of a Mars-Pluto hard aspect—which can tip into violence or destructive conflict—the sextile offers a channel through which their combined intensity can be directed toward shared goals, including the intimate ones. He feels supported by her to go deeper, and she feels that his drive is a trustworthy force rather than a threat. This is the aspect of the couple who can use their sexual connection not merely for pleasure but for genuine mutual transformation, for the healing of old wounds and the building of a private world that outsiders cannot touch.

In terms of whole-sign aspects, the trine between Harry's Taurus Moon and Meghan's Virgo Venus contributes a soft, receptive layer to the sexual field. Though not exact by degree, the sign-level harmony between these two Earth-tinged planets means that on an instinctive, bodily level, their rhythms can find a quiet resonance. Her way of loving—attentive, precise, devoted—feels naturally nourishing to his emotional body, and this likely translates into a post-intimate tenderness that is as important to the bond as the fire that precedes it.

The house placements reinforce the picture. Harry's Mars falls into Meghan's fifth house of romance and passion, a placement that directly activates her zone of play and pleasure. His mere presence in this house stimulates her desire to create, to laugh, to engage in the joyful physicality that fifth house intimacy embodies. Her Mars, along with her Sun and Mercury, sits in his seventh house of partnership, meaning that her desire-nature and her very identity are wired directly into his commitment sector. This is sexuality that flows naturally into partnership; it does not exist apart from the relationship but is one of its fundamental expressions. And her stellium in his eighth house—where Moon, Venus, Jupiter, and Saturn gather—places the entire spectrum of her relational and emotional nature into his zone of deep intimacy and shared resources. The eighth house is, among other things, the house of sexual merging at the soul level, and her presence there means that their physical connection is never merely physical. Every intimate encounter carries the potential for emotional revelation and for the activation of the deeper currents that run beneath the surface of their lives.

The composite chart's placement of both Venus and Mars in the twelfth house is a final note worth sounding. In the chart of the relationship itself, the love and desire planets sit in the house of the hidden, the spiritual, and the unconscious. This does not mean the intimacy is absent—far from it—but it suggests that much of the richest sexual material between them takes place in a realm that is not easily verbalised or shown to the world. There may be a quality of sanctuary in their physical connection, a sense that this is the one place where the public narrative cannot reach them. It can also, in the negative, point to a need to guard against the relationship becoming isolated or too sealed off from the nourishing light of daily life.

## Long-term potential

---

When assessing whether a couple is built to last, synastry turns its attention to Saturn, the planet of commitment and endurance, and Jupiter, the planet of growth and shared vision. In the chart of Harry and Meghan, both are strongly present, but they carry tension alongside their gifts. The long-term potential here is not a matter of a smooth road but of whether the structural supports are robust enough to weather the considerable pressures their union generates.

Saturn makes several important contacts. The exact sextile from Harry's Saturn to Meghan's Venus is one of the finest features of the long-term architecture. This harmonious linkage between the planet of responsibility and the planet of love creates, in the knowledge base's words, "stability, mutual responsibility." It means that Harry's instinct for discipline, structure, and long-term planning is not something that abrades Meghan's relational nature but something that supports it. She feels that his seriousness is a form of devotion, that his capacity to commit to the slow, unglamorous work of partnership is a gift rather than a burden. In a world where so much of their relationship has been played out in the glare of spectacle, this quiet Saturn-Venus sextile is the aspect of the couple sitting at the kitchen table, working through the practicalities, and finding, in that mundane act, a reaffirmation of their bond.

The square between Harry's Saturn and Meghan's Sun is more challenging. This is an exact, tight aspect, and the knowledge base describes it as bringing "limitations in self-expression, restraint, pessimism." Here, Harry's Saturnine energy—his tendency toward caution, his instinct for boundaries, his sensitivity to the weight of tradition—lands directly on Meghan's solar identity. She may, at times, experience his Saturn as a force that dampens her Leo radiance, that tells her, whether in words or in silences, that she must curb her natural exuberance to fit a mould not of her own making. This is not an easy aspect, and in the public narrative of their relationship, one can see its fingerprints: the woman who felt she had to dim her light to survive in an institution, the man who represented that institution's gravitational pull. Yet the square is not a sentence. The knowledge base insists that hard Saturn aspects "can provide discipline and structure instead of limitation," provided both partners are mature enough to work consciously with the dynamic. For Harry, the growth is to learn that protectiveness must not become control; for Meghan, the growth is to understand that his caution is often an expression of love, however clumsily delivered.

The Saturn-Mars trine is a constructive counterpart, bringing "stability and overcoming" to the action drive. This harmonious contact between his Saturn and her Mars means that the forward motion of the relationship—the decisions, the moves, the public battles—is underwritten by a genuine capacity to work together strategically. When they align on a course of action, they can be formidable. Her drive, his structural intelligence: the combination has already shown its power.

Jupiter's role is more complicated. The square between Harry's Jupiter and Meghan's Moon, already discussed in the emotional section, signals "disagreements in worldview." The square between his Jupiter and her Saturn pits expansion directly against limitation, producing a see-saw in which his impulse to grow, to move, to challenge boundaries is met by her instinct for caution, her sensitivity to consequence. And the square between their two Jupiters—his in Capricorn, hers in Libra—is a tension between two quite different philosophies of the good life. His Jupiter wants achievement, legacy, the steady climb; hers wants beauty, harmony, the cultivation of meaningful connections. Both are valid, but they pull in different directions, and the couple who cannot synthesise their Jupiters risks growing into two people who share a history but not a horizon.

The mutual reception between Harry's Sun in Virgo and Meghan's Mercury in Leo is a structural plus that supports longevity. Even in moments of conflict, there is a "point of contact" where his core identity and her way of thinking recognise each other. This does not solve problems, but it prevents disconnection from becoming total. Similarly, the list of green flags includes "exact personal-planet aspects"—there are three with an orb of less than one degree—which the knowledge base identifies as a karmic bond, a glue that holds beyond rational preference.

The composite chart provides the final lens. Here, the relationship itself has a Sun in Virgo in the eleventh house and a Moon in Cancer in the ninth. The eleventh-house Sun suggests that the pair's shared identity is deeply tied to friendship, community, and a larger social vision. They are at their best when they are working together on something that serves others, when the relationship is embedded in a network of meaning rather than isolated in a private bubble. The Cancer Moon in the ninth house gives the composite emotional body a nurturing, protective quality, tied to a shared search for wisdom and understanding. This is a couple who can build a home that is not just a physical space but a philosophical one—a set of values and beliefs that they pass on to their children and defend against outside pressures.

The critical pattern in the composite is the dual occupation of the first house by Jupiter and Saturn. Jupiter in the first house is, per the knowledge base, "a strong point for the pair—an area of success." Here, the relationship's public face, its very identity, is blessed with expansion and optimism. They are perceived as larger than life, and they can leverage that perception to achieve significant things. But Saturn also sits in the first house, and the knowledge base identifies this as "a sticking point—an area of difficulty." The Saturnine presence means that the relationship's identity is also a site of restriction, burden, and hard lessons. The public role that gives them so much also costs them so much; the very visibility that Jupiter amplifies is the field on which Saturn demands relentless discipline. Navigating this paradox—the blessing and the weight of public identity—will be the central long-term task of the union.

The composite Venus and Mars in the twelfth house add a note of caution. While the intimacy is deep, there is a risk of isolation, of the relationship becoming a retreat from the world rather than an engagement with it. The eleventh-house Sun and ninth-house Moon argue against this, but the twelfth-house placement of the love planets suggests that conscious effort is needed to keep the partnership connected to the broader currents of life.

Taken together, the long-term indicators are mixed but far from hopeless. There is genuine structural support in the Saturn-Venus sextile and the Mars-Saturn trine. There is significant tension in the Saturn-Sun square and the Jupiterian squares. The mutual reception provides a stabilising undercurrent. What is required is not effortless compatibility—that is not on offer here—but a conscious, adult commitment to work with the tensions as material for growth rather than as evidence of failure. If they can hold to that, the architecture is strong enough to carry them through.

## Growth zones and challenges

---

Every relationship contains zones where the friction is productive and zones where the friction can, if unmanaged, become destructive. For Harry and Meghan, the challenge zones are both numerous and highly specific, clustering around power, freedom, and the negotiation of public and private selves. The synastry does not lack for hard aspects, but it also provides, in each case, a pathway for transformation if the couple are willing to do the conscious work.

The most immediate tension is the Ascendant-Mars opposition, with Meghan's Mars opposing Harry's Ascendant and, by extension, her Mars conjunct his Descendant. This is an exact configuration and one of the most potent in the entire chart. Mars on the Descendant, and Mars opposite the Ascendant, brings a direct, confrontational energy into the partnership axis. In the positive register, this is an aspect of great energy and mutual activation: she stirs him to action, challenges his passivity, and insists that he meet life with vigour. The attraction is undeniable, and the passion it generates has fuelled some of their most decisive moves. In the negative register, it is a classic indicator of conflict, with Mars's aggressive, competitive nature projecting directly onto the "other" in the relationship. The knowledge base identifies Mars in the seventh house as carrying a risk of "excess dynamism, mutual aggression, and at tense aspects, a breakup with scandals." The key to working with this is channelling. When the Mars energy has a clear, shared target—a campaign, a legal battle, a creative project—it becomes a tremendous asset, driving the couple forward together. When it lacks an outlet, it turns inward and becomes squabbling, blame, or the slow erosion of goodwill. The practical recommendation is to ensure that there is always a joint enterprise of some kind, something that requires their combined fight and focus.

The Saturn-Sun square, already described, is a long-term teacher. Here, Harry's Saturn—the part of him that is cautious, bounded, and institutionally aware—presses against Meghan's solar identity. She may feel that he, at crucial moments, has not fully championed her, that his loyalty to structure has trumped his loyalty to her self-expression. He may feel that she misreads his caution as a lack of love. The resolution is not for one to capitulate to the other but for both to recognise that his Saturn and her Sun are engaged in a permanent negotiation, not a war. Over time, Saturn can refine the Sun, and the Sun can warm the Saturn, but only if both partners refuse to cast the other as the villain of the piece.

The Sun-Neptune square, also exact, introduces the theme of illusion. The knowledge base is blunt: "divergence in worldview, illusions, disappointments." Neptunian aspects in synastry can be beautiful in the early stages, bathing the beloved in a glow of idealised perfection. But as the fog lifts, disillusionment can set in, and the partner who was once seen as a saviour becomes the scapegoat for every unmet expectation. This square lives in the gap between the story they tell about each other and the complicated, flawed reality. The work is to practice relentless honesty, to correct the narrative back toward the real each time it drifts, and to forgive one another for not being the archetypes the early romance promised.

The complex of Moon-Uranus and Uranus-Venus tensions warrants separate attention. Meghan's Uranus opposes Harry's Moon, and the same planet squares Harry's Venus. Taken together, these aspects speak to a fundamental conflict between the need for security and the need for freedom. His Moon, the seat of his emotional body, is periodically destabilised by her Uranian unpredictability; his Venus, the way he loves, is challenged by her insistence on autonomy. In the knowledge base, Uranus hard aspects are described as bringing "unpredictability" and "the need for freedom," and they can, over time, grind down a relationship if the partner who needs stability feels consistently undermined. The antidote is not to eliminate the Uranian energy—it is, in many ways, the very thing that drew him to her—but to create structured pockets of freedom within the relationship where she can express her individuality without it feeling like a threat to the bond.

The Jupiterian squares—Jupiter-Moon, Jupiter-Saturn, Jupiter-Jupiter—are subtler but no less significant. They represent the places where the couple's philosophies, beliefs, and visions for the future diverge. The knowledge base identifies conflict-type Jupiter as manifesting in "moralising, lecturing, judgment." One can imagine the dinner-table conversation that begins as a discussion of a practical decision and escalates into a debate about values, with each partner convinced that their perspective is not just different but superior. The growth is to practice curiosity over conviction, to treat the other's worldview as interesting rather than threatening.

The contextual knowledge on divorce formulas and psychological indicators is worth touching on, not as a prediction but as a guide to areas of vulnerability. Harry's natal chart contains a tight Sun-Moon trine, which is a stabilising factor for the core self. But his Sun also squares Neptune natively, and this pre-existing susceptibility to idealisation and disappointment is amplified by the synastric Sun-Neptune square with Meghan. The tenth psychological indicator—"stress of Uranus on the Sun, Moon, Venus, or the ruler of the seventh"—is partially triggered by the Moon-Uranus and Venus-Uranus contacts. This is not a deterministic formula for divorce but a call to pay particular attention to the Uranian dynamics in the relationship. The natal infidelity indicators are relatively mild for both parties; neither has an afflicted Venus-Mars axis in Air, and the houses associated with infidelity—the third, fifth, eighth, and twelfth—are filled for Meghan but in ways that speak more to creative and spiritual expression than to chronic unfaithfulness.

For every challenge, there is a concrete possibility. The Mars-Ascendant opposition can be channelled into joint ventures. The Saturn-Sun square can mature into a dynamic of mutual refinement. The Sun-Neptune square can be healed by the daily practice of truth-telling. The Uranian tensions can be resolved through structured autonomy. The Jupiterian squares can become the source of rich, evolving conversations rather than repetitive conflicts. The difference lies, as it always does, in the willingness of the partners to do the work.

## Karmic threads

---

The synastry between Harry and Meghan is thick with karmic material. The presence of exact aspects to Chiron, the Nodes, and Lilith, combined with sensitive house placements, suggests that this relationship is not a random meeting but a continuation of a conversation that began long before either of them was born. The knowledge base on karmic points is clear: they are not planets but calculated points that gain significance only when they touch a planet, and in this chart, they touch many.

Chiron, the point of the wounded healer, is extraordinarily active. Harry's Chiron is retrograde in Gemini in his fifth house, while Meghan's Chiron sits in Taurus in her eleventh. Between them, Chiron forms harmonious aspects to a long list of Meghan's placements: her Sun, Moon, Mercury, Jupiter, Saturn, Medium Coeli, and Imum Coeli. This is a pattern of radical sensitivity, where his wound—the part of him that carries pain from the past and from which he can heal others—is in almost constant sympathetic dialogue with her entire being. In practical terms, Meghan may find that Harry can, without intending to, put his finger on the exact spot where she hurts and, in doing so, offer a specific quality of understanding that no one else has provided. The Chiron-Moon trine is particularly poignant, suggesting that his presence soothes her emotional body at a level below language. The Chiron-Sun sextile indicates that his woundedness, rather than being a burden to her identity, actually illuminates it, helping her see herself more clearly.

The North Node of Harry's chart makes a tight trine to Meghan's Moon, and both Nodes form flowing aspects to her Ascendant and Descendant. This is classical karmic architecture. The North Node represents the direction of growth, and when it contacts a partner's Moon, the knowledge base tells us that "the partner helps move toward karmic goals." Meghan's emotional nature—her very way of feeling and responding to life—is somehow aligned with the direction Harry is meant to evolve in this lifetime. Conversely, the South Node conjunct Meghan's Uranus suggests a past-life connection in which disruption, sudden change, or a break from convention played a central role. The feeling of familiarity between them, the sense that they have "met before," is not merely romantic fancy; it is encoded in these nodal contacts.

The involvement of Pluto with the Nodes adds a note of intensity that cannot be ignored. Harry's Pluto squares Meghan's North Node, an aspect that speaks to a karmic obligation that is not comfortable but is necessary. Pluto's presence on the Node suggests that their relationship involves confronting shadow material—power struggles,

control issues, the darker side of love—that must be worked through for the evolutionary potential to be realised. This is a couple who are not just learning to love one another but learning something essential about the nature of love itself through the crucible of their union.

Lilith, the point of the repressed and the taboo, is configured with both Sun and Moon. Harry's Lilith opposes Meghan's Moon and his Moon opposes her Lilith, creating a dynamic in which the shadow sides of their emotional natures are constantly being provoked into expression. Lilith aspects are never comfortable; they stir the unacknowledged, the shamed, the denied. In this relationship, both partners will periodically find themselves reacting in ways that surprise and disturb them, and the challenge is to bring those reactions into the light rather than projecting them onto the other. The Lilith-Moon opposition is particularly relevant in the context of the public demonisation Meghan has endured. Astrologically, one could say that she has served as a screen onto which collective Lilith material—the fear of the powerful woman, the suspicion of the outsider—has been projected, and that Harry's role has been to witness and to stand by her through that trial.

The house placements deepen the karmic reading. Meghan's Mars sits in her twelfth house natively, while in the composite, both Venus and Mars occupy the twelfth. The twelfth house is the house of the unconscious, the hidden, the ancestral. A relationship in which the composite love planets sit in this house does not unfold entirely in the light. Much of the transformative work happens beneath the surface, in dreams, in the unspoken, in the slow alchemical process that neither partner fully controls. It is significant, too, that Meghan's natal Chiron lies in her eleventh house, the house of community and social vision, while the composite North Node is in Cancer in the ninth house—a placement that points the shared evolutionary path toward emotional wisdom and the search for meaning.

The parental karmic scenarios, drawn from the natal charts, add a further layer. The knowledge base instructs us to read the fourth house as the parent of opposite gender and the tenth house as the parent of the same gender. For Harry, a man, the fourth house describes the maternal figure and the tenth the paternal. His IC, the root of the chart, sits in Taurus with the Moon exactly conjoined, and his MC in Scorpio with Pluto nearby. The narrative of a mother whose emotional presence (Moon) was grounding and deeply valued (Taurus) but who was lost, and the subsequent transformation of that loss into a public calling (Scorpio MC), is written plainly here. His South Node in the tenth house further suggests that the paternal legacy—the institutional burden, the Crown—is karmic material he came into this life carrying. Meghan, a woman, reads the fourth house as the father and the tenth as the mother. Her IC in Libra, conjunct Jupiter and Saturn, and her MC in Aries, speak to a paternal inheritance of justice, balance, and high expectation (Libra Saturn) and a maternal lineage of independence and self-starting (Aries MC). The overlay of their two karmic lines produces a couple who are both working through deeply imprinted family scripts about duty, loss, identity, and freedom.

This is, unmistakably, a karmic relationship. The exact aspects, the nodal-Lilith-Chiron saturation, and the house placements all point to a union that was not chosen lightly but arrived with the force of inevitability. The task is not to escape the karma but to meet it consciously, to use the intense mirroring this relationship provides to heal what is ready to be healed and to grow into the people the planetary patterns are calling them to become.

## Practical recommendations

---

The following recommendations are drawn directly from the specific aspects in this synastry and the patterns identified in the composite chart. They are designed not as generic relationship advice but as targeted strategies for working with the precise energies Harry and Meghan embody together.

First, and perhaps most importantly, establish a joint enterprise that absorbs the Mars-Ascendant opposition. This is a couple with an extraordinary amount of combative, dynamic energy flowing through the partnership axis. When that energy has a clear target—their charitable foundation, a media project, a shared mission—it becomes a bonding force of remarkable power. When it lacks direction, it turns inward and becomes bickering, tension, or the insidious sense that the partner is the obstacle rather than the ally. The practical form this takes matters less than the regularity: schedule a weekly working session on the shared project, treat it as sacred, and let the Mars fire burn productively there so it doesn't spill into the kitchen at midnight.

Second, build bridges across the Saturn-Sun square by instituting a practice of mutual permission. His Saturn will, at times, feel compelled to set limits on her self-expression; her Sun will, at times, experience that limiting as a denial of who she fundamentally is. The way through is to make the permission explicit rather than assumed. Once a month, sit down and each name one thing the other has done that made them feel restricted, and one thing the other did that made them feel seen. This is not a complaint session but a calibration, and over time it will train both of them to recognise the patterns before they escalate.

Third, manage the Neptune-Sun square with a simple but non-negotiable practice of clarification. When decisions are made, repeat back to one another what was agreed. When feelings are expressed, ask "do I have that right?" before responding. The danger of Neptune is that it creates a shimmering fog in which both partners believe they have communicated clearly when, in fact, they have projected two entirely different scenarios onto a shared silence. The discipline of clarification is the antidote, and it need not be heavy; "just so I'm clear, when you said X, did you mean Y?" is a sentence that can save weeks of hurt.

Fourth, honour the Uranian need for freedom within the container of commitment. The Moon-Uranus and Venus-Uranus tensions are real, and they will not be resolved by pretending the need for autonomy doesn't exist. Meghan needs pockets of space where she can follow her own impulses without negotiating every move—a solo trip, a creative project she doesn't report back on, a weekend day with no shared plans. Harry needs the reassurance that these departures are not departures from him. The practical form is a standing agreement: she has a specific, recurring slot of complete autonomy, and he has the explicit affirmation that this autonomy is an expression of the relationship's strength, not its weakness.

Fifth, address the Jupiterian squares by scheduling structured conversations about values and vision. The tension between his Jupiter in Capricorn and her Moon in Libra, between his expansive optimism and her need for emotional security, will not resolve itself through casual chat. Set aside an evening every two months—no phones, no children, no agenda beyond the question "what matters most to us right now?" The goal is not agreement but understanding; the discipline is to listen until the other person's worldview makes sense on its own terms, even if it is not shared.

Sixth, use the composite first-house Jupiter-Saturn conjunction as a conscious framework. The relationship's public identity is both its greatest asset and its greatest burden. To prevent the Saturnine weight from crushing the Jupiterian expansion, explicitly separate "what the world asks of us" from "what we ask of ourselves." Make a list

of the external expectations that feel oppressive, and beside each, write what the two of you, in your deepest honesty, actually want. This exercise, repeated annually, will prevent the public narrative from colonising the private truth.

Seventh, tend to the Chiron-Moon healing. The synastry contains an unusual concentration of Chiron contacts to Meghan's personal points, and the Chiron-Moon trine in particular suggests that Harry's presence is deeply soothing to her emotional body. But Chiron also asks for conscious acknowledgment. Make it a practice, perhaps on a quiet Sunday morning, to share one memory or feeling from childhood that still carries a sting, and let the other simply listen without fixing. The healing is in the witnessing, not in the solution.

Eighth, given the mutual reception between his Sun and her Mercury, lean into the way language functions uniquely between them. When conflict arises, let her speak first, as her Mercury is the natural opener, and let him respond with care, as his Sun in Virgo will naturally guide him toward the precise, helpful word. The order matters: her ease in expression, followed by his precision in response, creates a communication flow that plays to both their strengths.

Ninth, attend to the twelfth-house composite Venus and Mars by building a physical sanctuary. The twelfth house is the house of retreat, and with the love and desire planets placed there, the relationship needs a literal, physical space that belongs only to them—a room, a corner of the garden, a place where the world cannot enter. Fill it with things that hold meaning, and use it regularly. The intimacy will deepen in proportion to the care given to this container.

Finally, recognise the composite Sun in the eleventh house and Moon in the ninth as a call to shared learning. Read a book together, take a course, attend a lecture series, plan a journey that is structured around something you both want to understand better. The relationship's vitality is tied to the pursuit of wisdom, and when the learning stops, the stagnation begins. Make the shared intellectual life as deliberate as the romantic one.

## Final verdict: Prince Harry and Meghan Markle

Prince Harry and Meghan Markle are a couple whose synastry tells a story of profound connection, considerable challenge, and the kind of transformative potential that rarely arrives without cost. The overall compatibility score of 57% is an honest reflection of a chart that contains both the architecture of enduring love and the fault lines that demand constant, conscious attention.

The green flags, as enumerated in the knowledge base, are present in encouraging number. Mutual reception between his Sun and her Mercury provides a structural intelligibility that underpins all their interactions. The three exact personal-planet aspects mark a karmic bond that neither will find easy to replicate or dismiss. The Venus-Mars contact, however hard, ensures that the engine of attraction does not stall. And the list of additional green flags—the multiple personal-planet conjunctions, the Saturn-Venus sextile, the North Node-Moon trine—adds substantiating weight. They are not a couple who are together by accident, nor one whose bond is merely circumstantial.

The red flags are equally clear and must be named. The Ascendant-Mars opposition introduces a confrontational energy into the partnership axis that, if unchanneled, can become corrosive. The Uranus-Venus square and Moon-Uranus opposition test the relationship's capacity to hold individuality and togetherness in simultaneous tension. The Sun-Neptune square threatens the clarity on which trust depends. The Lilith oppositions stir shadow material that requires a willingness to look at the parts of themselves they might prefer to leave unexamined. These are not reasons to separate; they are the curriculum.

The pair's top three strengths, as I read this synastry, are these. First, the capacity for transformation encoded in the Venus-Pluto conjunction and the eighth-house stellium. This couple do not stay the same; they change each other, and that capacity for mutual evolution is the mark of a relationship that is genuinely alive. Second, the Saturn-Venus sextile, which provides the quiet, unglamorous commitment to stay when the passion sputters, to do the practical work, to build something durable in a world that would prefer them to fracture. Third, the Chironic healing, the way his presence soothes wounds she may not have known she carried, and hers accesses a vulnerability in him that the formal structures of his life have long suppressed.

The top three growth zones are the Saturn-Sun square, the Mars-Ascendant opposition, and the Sun-Neptune square. The Saturn-Sun tension will require a lifetime of negotiating the space between his caution and her expression, and it will fail only if either decides that the other is the problem rather than a partner in the work. The Mars-Ascendant dynamic needs a channel, a mission, a fire that burns outward rather than inward. The Neptune-Sun fog needs the daily discipline of truth, the small corrections that prevent large illusions from taking root.

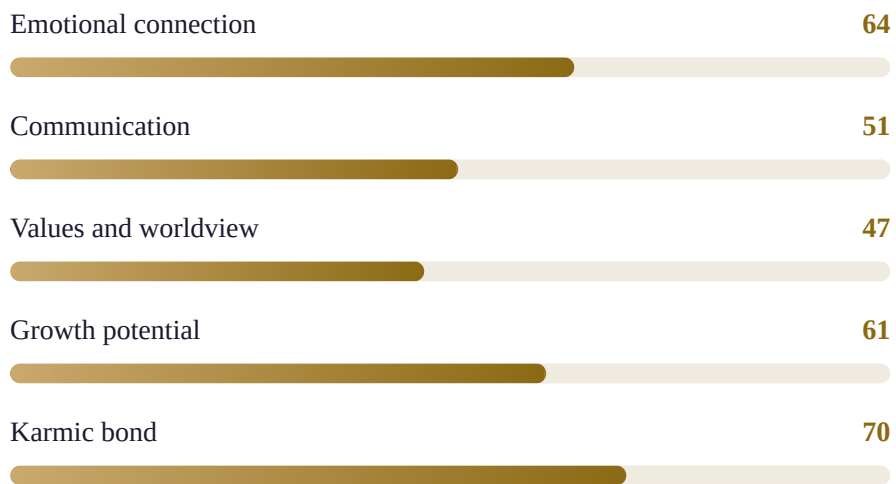

The overall score of 57% should be read not as mediocrity but as intensity. This is not a relationship that drifts along in gentle compatibility; it is one that burns bright, demands everything, and offers, in return, the kind of depth that more placid unions can only envy. Whether it lasts will come down to the daily, unglamorous choices both make. The astrology says the potential is there. The rest is up to them.
